REFLECTION QUESTIONS

1. *What is the main difference between renewable and non-renewable resources? Which are better for the environment?*
2. *Name three different types of renewable energy that humans can start using.*
3. *What were some challenges faced by the people of Samsø Island in transitioning to renewable energy sources?*
4. *How did the switch to renewable energy impact the lives of the people living on Samsø Island?*

ACTIVITIES

Renewable Energy Everywhere!

On Energy Island, all sources of energy are renewable. Challenge students to take notice of renewable energy sources they might see around their neighborhoods or across the town. See if they can keep track and keep a running tally on your white board of the renewables they might see in your town. Is this enough to power your whole town? Why aren't there more? Are there renewable energy sources in places you wouldn't expect?
