

Parent Take-Home Guide

HABITAT

Overview:

Today, 'Change is Simple' joined your student's class. 'Change is Simple' is an organization that teaches students about science, sustainability, and the world around them. We visit the school multiple times each year with exciting new science topics! Our program is fun, engaging, and interactive for all students.

ACTIVITIES

Students explored the habitats of various animal species in the local environment. They practiced counting the different components of habitats, such as food, water, and shelter, that help animals survive. Students then worked together to construct a beaver dam and learned about how this animal was able to alter its environment to make a better habitat.

SUPPORT

Talk about habitats with your student! When you see an animal, ask them what they think their habitat is. How do they get their food, water, shelter? You can discuss all sorts of different animals, from dogs, to squirrels, to people, to help your student review the different elements of a habitat.
